Art Unit: 1722

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-54, drawn to a mold assembly, classified in class 425, subclass 441.

II. Claims 55-67, drawn to a sliding gear assembly, classified in class 74, subclass 665.

2. The inventions are distinct; each from the other because of the following reasons:

Inventions Group I and Group II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations. MPEP § 806.05(c).

In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require two slidable gear elements. The subcombination has separate utility such as moving a structure other than a liner plate of a mold assembly; for example, a platen of a press.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Donald Heckenberg whose telephone number is (571) 272-1131. The examiner can normally be reached on Monday through Friday from 9:30 A.M. to 6:00 P.M.
